

DR. GEORGE SANDERS

ENCINO, CALIFORNIA

American Board of Plastic Surgery

WHAT IS YOUR FAVORITE STYLE OF FACELIFT?

Although I have used many techniques throughout my career, my favorite is the MACS-Lift because of its low risk and superb results. If a patient needs a greater degree of improvement in the neck than a basic MACS-Lift allows, I can modify the procedure to accomplish their desired result. For those patients needing additional lifting of the cheeks, an Extended MACS-Lift procedure can be the solution.

WHAT DOES A CONSULTATION WITH YOU ENTAIL?

After listening carefully and examining the patient thoroughly, appropriate options are discussed and a recommendation for treatment is made. In some cases, modern imaging techniques are used to enhance communication between patient and surgeon. If the patient feels that the image conveys their desired appearance and I believe I can deliver the look, we're good to go!

HOW IS BREAST AUGMENTATION A BETTER PROCEDURE TODAY THAN IT WAS YEARS AGO?

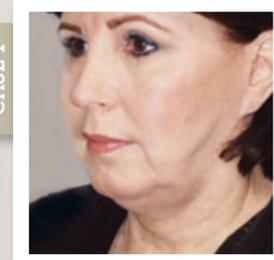

Not only are the implants far sturdier and less prone to leakage, but we also have a much better understanding of how to minimize complications from surgery.

INNOVATIVE TECHNIQUES

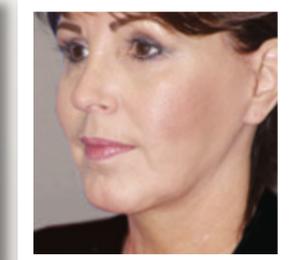

Dr. Sanders uses imaging technology in his practice, primarily for facial surgery patients. He also uses a type of tummy tuck technique that allows for a lower chance of fluid collections afterwards, and in some cases, allows for no drains at all. Minimal scar breast lifts are used whenever an excellent result can be obtained, and facelifts are performed under local anesthesia when a more extensive lift is not required. "All surgeries are done at the fully certified Encino Surgicenter, located adjacent to my office. Patients can choose either a sedation or local method of anesthesia depending on what best suits their surgical needs."

BEFORE

CASE 1

AFTER

MACS-LIFT SURGERY

To help this 62-year-old patient correct her sagging jawline and neck, Dr. Sanders performed a MACS-Lift and chin augmentation.

BEFORE

CASE 2

AFTER

BREAST AUGMENTATION

Dr. Sanders utilized a submuscular dual plane implant placement with the use of 325-cc implants to achieve this result.

"THE NATURAL LOOK IS MAKING A COMEBACK"

ABOUT GEORGE SANDERS, MD

SERVICES

- Breast Augmentation / Cosmetic Breast Surgery
- MACS-Lift / Facelift and Other Facial Cosmetic Procedures

- Rapid Recovery Facial Laser Treatments / Injectables
- Tummy Tuck and Liposuction

A HARVARD MEDICAL SCHOOL GRADUATE WITH FELLOWSHIP TRAINING FROM UCLA, DR. GEORGE SANDERS IS DEDICATED TO ENHANCING THE HUMAN FORM IN A MOST NATURAL WAY, YET HE AND HIS STAFF NEVER LOSE SIGHT OF THE HUMAN SPIRIT IN ORDER TO CREATE A SENSITIVE AND NURTURING ENVIRONMENT FOR EVERY PATIENT.

WHAT IS THE RECOVERY LIKE AFTER A MACS-LIFT?

Since a MACS-Lift can be performed under local anesthesia and without post-surgical drains, the recovery tends to be less difficult. Patients may go directly home after surgery and may resume normal activities after one and a half weeks and light exercise by two weeks.

WHY DID YOU BECOME A PLASTIC SURGEON?

As a medical student I was attracted to psychiatry and the concept of changing a person's self-image. When I was exposed to plastic surgery, I realized that this was a pathway to improving self-image in a matter of hours instead of the years required by psychiatry.

WHAT QUALITIES MAKE A DOCTOR DISTINGUISHED?

Selflessness, honesty and integrity. The person should also have the impression that they are called to the profession as opposed to seeing it as a pathway to prestige and riches. Its richest rewards come in the form of expressions of gratitude and thank you letters from patients.

WHAT ALTERNATIVE OCCUPATION WOULD YOU CHOOSE?

Philanthropy has always appealed to me. I also believe I would enjoy being a college professor! When I began college I wanted to be a high school science teacher, but the fact that there were over 100 PhD candidates for a single science teaching position made medical school seem like an easier path to follow. I'm glad I took that route!
